

MARK NATHAN B. OLMEDO

Navotas City, PH | +63 962 260 4792 | mn.olmedo4@gmail.com | github.com/4aer

PROFESSIONAL SUMMARY

Graduating Bachelor of Science in Information Technology student with hands-on experience in software development, backend engineering, and IT infrastructure support. Experienced in building production applications, integrating REST APIs, and troubleshooting systems. Passionate about creating practical software solutions and continuously learning and improving various technical skills.

TECHNICAL SKILLS

Languages: Python, JavaScript, PHP, SQL

Frameworks: Next.js, FastAPI, Flask, React, Node.js, Express, CodeIgniter 4

Databases & Cloud: PostgreSQL, MySQL, SQLite, Supabase, Vercel, Render, AWS

Security & Infra: Elastic Agent, Wazuh SIEM, endpoint troubleshooting, remote admin

Other: REST APIs, Git/GitHub, Docker, IoT (Raspberry Pi, ESP32, MQTT)

WORK EXPERIENCE

Computer Support Operations Intern - Bank of Makati

Jan 2026 – May 2026

Desktop, Network, and Access Department

- Contributed to an enterprise-wide SIEM deployment, remotely installing and configuring Elastic Agent and Wazuh Agent across 100+ workstations, coordinating scheduling with branch departments independently.
- Resolved recurring SIEM enrollment failures through systematic troubleshooting, ensuring zero gaps in monitoring coverage across the deployment campaign.
- Diagnosed and resolved hardware and software support tickets alongside Technical Support Engineers, including root-causing BSOD errors via crash log analysis and SFC/DISM diagnostics.
- Performed component-level hardware diagnosis, isolating and replacing defective RAM, PSUs, and motherboards through systematic elimination testing.

PROJECTS

Cinelyt | AI-Powered Streaming Discovery Platform

March 2026

Next.js · TypeScript · FastAPI · Python · Supabase · Gemini AI · TMDB API

- Built a full-stack platform combining Gemini AI and TMDB API to generate personalized movie/TV recommendations with media playback.
- Implemented global state management using Zustand with persistent storage.
- Deployed on a split architecture (Vercel frontend, Render backend), configuring CORS and environment variables for production.

SARGO: Smart Assisted Rental Game Operation (Capstone)

Nov 2025

Raspberry Pi · ESP32 · Python · JavaScript · IoT · MQTT

- Led development of a Raspberry Pi-based rental system integrating sensor inputs, relay-controlled hardware, and MQTT communication.
- Built a billing module that computes rental cost from session duration and auto-triggers settlement, removing manual billing.
- Developed a web-based dashboard for live session tracking and usage logs, giving operators full visibility without manual checks.

Jotter | Infinite-Canvas Whiteboard App

June 2026

React · TypeScript · Vite · Zustand · Raw HTML5 Canvas

- Built an infinite-canvas whiteboard from scratch on raw HTML5 Canvas rather than a canvas library, supporting paste-to-canvas and pen/highlighter/shape tools.
- Designed a unified element data model (shared position, size, rotation, z-index across images, text, strokes, and shapes) so rendering, hit-detection, and undo/redo all operate on one predictable structure.

LeMemory | LeBron James Themed Memory Card Game

Jan 2025

Vanilla JS · HTML5 · CSS · OOP · Web Audio API

- Architected a fully client-side memory card game with zero dependencies, using separate classes for state, controls, cards, audio, and UI, with 4 difficulty modes and score persistence.

EDUCATION

Bachelor of Science in Information Technology | Sept 2022 – Aug 2026

Manila, Philippines

National Teachers College, Manila | Coursework: Software Engineering, Databases, Web Development, Networking, InfoSec

CERTIFICATIONS & ACHIEVEMENTS

- IBM (Coursera): Back-End Apps with Node.js/Express, Front-End Apps with React, Intro to Software Engineering (2025)
- Cisco Networking Academy: Python Essentials 1 & 2, JavaScript Essentials 1 & 2 (2024)
- Emerging Technology Award, Old.St Labs Hackathon (Nov 2025)
- Gold Medal, Young Inventors Forum, Expo & Trade Fair - DOST (Feb 2019)
